EXAMINER'S AMENDMENT

1. Claims 1-15, 17-32, 34-49, and 51 are allowed.

2. Claims 16, 33, and 50 are cancelled.

3. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Edward J. Grundler on 06/23/2005.

The application has been amended as follows for avoiding relative terminology that would renders the claims indefinite:

In the claims:

1. (Currently amended) A method for using a computer system to solve a global inequality constrained optimization problem specified by a function and a set of inequality constraints $p_i(x) \le 0$ (i=1, ...,m), wherein f and p_i are scalar functions of a vector $x = (x_1, x_2, x_3 ... x_n)$, the method comprising: receiving a representation of the function/and the set of inequality constraints at the computer system; storing the representation in a memory within the computer system; performing an interval inequality constrained global optimization process to compute guaranteed bounds on a globally minimum value of the function f(x) subject to the set of inequality constraints;

wherein performing the interval inequality constrained global optimization process involves, applying term consistency to a set of relations associated with the global inequality constrained optimization problem over a subbox X, and excluding any portion of the subbox X that violates any of these relations, applying box consistency to the set of relations associated with the global inequality constrained optimization problem over the subbox X, and excluding any portion of the subbox X that violates any of these relations, and performing an interval Newton step for the global inequality constrained optimization problem over the subbox X to produce a resulting subbox Y, wherein the point of expansion of the interval Newton step is a point x: and recording the guaranteed bounds in the computer system memory; wherein applying term consistency involves: symbolically manipulating an equation within the computer system to solve for a term, $g(x'_i)$, thereby producing a modified equation $g(x'_i) = h(x)$ wherein the term $g(x'_i)$ can be is analytically inverted to produce an inverse function g⁻¹(y), substituting the subbox X into the modified equation to produce the equation $g(X'_i) = h(X)$, solving for $X'_i = g^{-1}$ $^{1}(h(X))$, and intersecting X'_i with the j-th element of the subbox X to produce a new subbox X⁺, wherein the new subbox X⁺ contains all solutions of the equation within the subbox X, and wherein the size of the new subbox X⁺ is less than or equal to the size of the subbox X.

18. (Currently amended) A computer-readable storage medium storing instructions that when executed by a computer cause the computer to perform a method for using a computer system to solve a global inequality constrained optimization problem specified by a function/and a set of inequality constraints $p_i(x) \le 0$ (i=1, ...,m),

wherein f and p_i are scalar functions of a vector $x = (x_1, x_2, x_3 \dots x_n)$, the method comprising: receiving a representation of the function/and the set of inequality constraints at the computer system; storing the representation in a memory within the computer system; performing an interval inequality constrained global optimization process to compute guaranteed bounds on a globally minimum value of the function f(x) subject to the set of inequality constraints; wherein performing the interval inequality constrained global optimization process involves, applying term consistency to a set of relations associated with the global inequality constrained optimization problem over a subbox X. and excluding any portion of the subbox X that violates any of these relations, applying box consistency to the set of relations associated with the global inequality constrained optimization problem over the subbox X, and excluding any portion of the subbox X that violates any of these relations, and performing an interval Newton step for the global inequality constrained optimization problem over the subbox X to produce a resulting subbox Y, wherein the point of expansion of the interval Newton step is a point x: and recording the guaranteed bounds in the computer system memory; wherein applying term consistency involves: symbolically manipulating an equation within the computer system to solve for a term, $g(x'_i)$, thereby producing a modified equation $g(x'_i) = h(x)$ wherein the term $g(x'_i)$ can be is analytically inverted to produce an inverse function $g^{-1}(y)$, substituting the subbox X into the modified equation to produce the equation $g(X'_i)$ = h(X), solving for $X'_i = g^{-1}(h(X))$, and intersecting X'_i with the j-th element of the subbox X to produce a new subbox X^+ , wherein the new subbox X^+ contains all solutions of the

equation within the subbox X, and wherein the size of the new subbox X^+ is less than or equal to the size of the subbox X.

35. (Currently amended) An apparatus that solves a global inequality constrained optimization problem specified by a function f and a set of inequality constraints $p_i(x) \le 0$ (i=1, ..., m), wherein f and p_i are scalar functions of a vector $x = (x_1, x_2, x_3, ..., x_n)$, the apparatus comprising: a receiving mechanism that is configured to receive a representation of the function/and the set of inequality constraints at the computer system; a memory for storing the representation, an interval global optimization mechanism that is configured to perform an interval inequality constrained global optimization process to compute guaranteed bounds on a globally minimum value of the function f(x) subject to the set of inequality constraints; a term consistency mechanism within the interval global optimization mechanism that is configured to apply term consistency to a set of relations associated with the global inequality constrained optimization problem over a subbox X, and to exclude any portion of the subbox X that violates any of these relations, a box consistency mechanism within the interval global optimization mechanism that is configured to apply box consistency to the set of relations associated with the global inequality constrained optimization problem over the subbox X, and to exclude any portion of the subbox X that violates any of these relations, and an interval Newton mechanism within the interval global optimization mechanism that is configured to perform an interval Newton step for the global inequality constrained optimization problem over the subbox X to produce a resulting subbox Y, wherein the point of expansion of the interval Newton step is a point x: and a recording mechanism

that is configured to record the guaranteed bounds in the computer system memory: wherein the term consistency mechanism is configured to: symbolically manipulating an equation within the computer system to solve for a term, $g(x'_j)$, thereby producing a modified equation $g(x'_j) = h(x)$ wherein the term $g(x'_j)$ ean be is analytically inverted to produce an inverse function $g^{-1}(y)$, substituting the subbox X into the modified equation to produce the equation $g(X'_j) = h(X)$, solving for $X'_j = g^{-1}(h(X))$, and intersecting X'_j with the j-th element of the subbox X to produce a new subbox X^+ , wherein the new subbox X^+ contains all solutions of the equation within the subbox X, and wherein the size of the new subbox X^+ is less than or equal to the size of the subbox X.

REASONS FOR ALLOWANCE

4. The following is an examiner's statement of reasons for allowance:

The prior art of records fails to disclose or render an obviousness of a method, apparatus, and computer-readable medium for solving a global inequality constrained optimization problem specified by a function f and a set of inequality constraints $p_i(x)$ wherein f and p_i are scalar functions of a vector X comprising receiving a representation; storing the representation; performing an interval inequality constrained global optimization on the function f involving performing an interval Newton steps and symbolically manipulating an equation within the system to solve for a term $g(x'_j)$ to produce a modified equation wherein the term $g(x'_j)$ analytically inverted to produce an inverse function $g^{-1}(y)$ and use that inversed function to solve for X'_j as seen in independent claims 1, 18, and 35.

Application/Control Number: 10/042,883

Art Unit: 2193

The closest found prior art is Eldon ("Global Optimization Using Interval Analysis"). Eldon disclose a method, apparatus, and computer-readable medium for solving a global inequality constrained optimization problem specified by a function f and a set of inequality constraints $p_i(x)$ wherein f and p_i are scalar functions of a vector X comprising receiving a representation; storing the representation; performing an interval inequality constrained global optimization on the function f involving performing an interval Newton steps. However, Eldon fails to disclose steps of symbolically manipulating an equation within the system to solve for a term $g(x'_j)$ to produce a modified equation wherein the term $g(x'_j)$ analytically inverted to produce an inverse function $g^{-1}(y)$ and use that inversed function to solve for X'_j as seen above.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Chat C. Do whose telephone number is (571) 272-3721. The examiner can normally be reached on 7:00AM to 5:00PM M-Th.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Chaki Kakali can be reached on (571) 272-3719. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
